

# Important Information

## Important Safety Information about Lithium-Ion Batteries and Chargers

To avoid the risk of damage, fire, overheating and electric shock:

- Never allow the Lithium-Ion battery or remote to become submerged in water.  
Should submersion of the battery occur: (1) do not use the product, (2) store it outside in a non-combustible container, and (3) contact your local distributor for further instructions.
- Only charge the battery with the supplied charger.
- The charger should not be exposed to rain, moisture or dampness.
- Do not use the charger or battery if either become damaged.
- The supplied battery charger generates heat during use; place it only on heat resistant surfaces.
- Do not charge the battery in temperatures below freezing.
- Always check with your airline before flying with the battery.
- Only dispose of the battery in accordance with local regulations.
- Only use battery supplied by our company.

### Battery Specifications

This product utilizes 20 lithium ion cells (18650) packed and shrink-wrapped with protection circuitry. The maximum rated capacity is 158.4Wh. The battery inside this product complies with UN38.3 and IEC62133 safety requirements.
